Currently responsible for all software at an accessibility audit company — from audit systems and a field mobile app to websites and online stores. Two of the systems I built are sold to external clients, and I took part in setting the commercial terms for both. I work with clients directly, from gathering requirements through to later changes.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL, PHP (basics)
Front end & mobile	React, Next.js, React Native / Expo, Tailwind CSS
Back end & data	Node.js, PostgreSQL, Prisma, Supabase (RLS, pgvector), Redis, BullMQ
AI & practices	RAG (hybrid search, embeddings), unit and integration testing, Docker, Sentry, WCAG 2.1/2.2, EN 301 549

EXPERIENCE

Software Developer · Nautil Sp. z o.o. 09.2024 – present · Gdynia, Poland
Digital and built-environment accessibility audits. The company has no development team. The three largest systems are below.

Digital accessibility audit platform · panel.nautil.pl

- Replaced a report generator built in Google Sheets with a web application: 103 API endpoints, 24 data models, 95 migrations, 879 commits over 14 months. Used by 12 auditors; 234 audits in the first year.
- Report generation dropped from 20 to 5 minutes — roughly 58 hours of auditor time across those audits.
- Added AI support on a knowledge base built from W3C Techniques and ACT Rules: vector search, few-shot learning on examples chosen by auditors, cost tracking, response caching.
- Wrote two-way Google Sheets synchronisation so the team could move to the new panel gradually. 150 test files, including integration tests against PostgreSQL in a container.

Next.js · React · Prisma · PostgreSQL · NextAuth · Google Cloud Storage · Sentry · Odoo · DOCX and VPAT output

Built-environment accessibility audit system · panelarch.nautil.pl

- Three applications: a mobile app for field work (React Native/Expo), a document generation service and a web panel. 69 audits in the first year, 2 auditors in-house and 5 at the client.
- The previous app lost audit data on weak connectivity, in practice every time. After the rebuild it no longer happens; 27 test files cover failure scenarios.
- Uploads retry with exponential backoff and full jitter, with error classification and bounded parallelism. If the OS kills the app mid-upload, it checks server-side state on restart instead of guessing.
- One codebase serves several clients — colours, limits and permissions come from configuration, and an auditor account is bound to a device. The client pays an implementation fee, a subscription and per-seat licences (currently 5); I took part in setting the model, and they ran 34 of the 69 audits.

React Native · Expo · Supabase (PostgreSQL, RLS) · Zustand · React Query · Zod · Next.js

Industry association management panel · panel.pisil.pl

- The association handled its members manually, by e-mail and on paper. The panel runs 196 members and new-member applications (31 submissions): 33 data models, 50 migrations, 321 commits.
- Bulk e-mail goes through a queue (BullMQ + Redis) in a separate worker process, with a send log and resumption after a restart. Events module: registrations, pricing tiers, payments, mailings.
- Wrote a WordPress plugin (PHP) that shows the member list and event sign-ups on the client website. Took part in preparing the offer and handle day-to-day arrangements with the association.

Next.js · Prisma · PostgreSQL · BullMQ · Redis · PM2 · docxtemplater · pdf-lib · PHP

OWN PROJECT

Produkt Hub · produkt-hub.vercel.app

A tool for a Slovenian construction chemicals manufacturer — it selects products and complete coating systems from a problem described in plain language. The manufacturer is interested in deploying it; talks are ongoing.

- Search combines vector (pgvector) and full-text results, merged with Reciprocal Rank Fusion. For queries outside the catalogue it does not guess — it asks for clarification.
- Multi-tenant database with Row Level Security, data taken from the manufacturer technical data sheets (PDF parsing, cleaning, indexing). Embeddable on the client website, interface in four languages.

Next.js · React · TypeScript · Supabase + pgvector · Gemini

EDUCATION AND LANGUAGES

Gdynia Maritime University — BEng in Computer Science, thesis defended April 2025 with the highest grade 10.2021 – 04.2025
Polish — native · English — B2
